                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to non-natural variants of a C-terminal fragment of a Plasmodium merozoite surface protein-1 (MSP-1). The non-natural variants have reduced affinity for at least 1 antibody capable of blocking a second antibody that inhibits the proteolytic cleavage of plasmodium MSP-1_4_2, and has the same affinity for at least one third antibody that inhibits the proteolytic Cleavage of plasmodium MSP-1_4_2, and has the same affinity for at least MSP-1_4_2, compared to natural MSP-1_1_9. The non-natural variants of the present invention are useful for immunising a mammal against malaria, and can be used to treat malaria. The present sequence is MSP-119 protein.
                                                                                                                                                2
                                                                                                                                          Gaps-f
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     نَ

Sequence of the CS gene (AAN81108) is from lambda-mPfl. A recombinant DNA molecule is claimed, comprising functional DNA coding sequence fused, in phase, to a portion of the Pre-S2 region of a hepatitis B Virus (HBV) Pre-S3-protein coding sequence. The functional DNA coding sequence comprises the Pre-S2 coding sequence, Pre-S1 coding sequence, pre-S1 coding sequence or entire Plasmodium, or a HIV coding sequence such as an HIV coding sequence such as an HIV envelope gene sequence, e.g. HIV C7 protein coding region, HIV Peptide 121 coding region, or HIV Dreesman peptide coding region.

Peptide antigens may be synthesised in pure form and used to generate an immune response in vaccination against malaria. The featured repeat units are claimed and must be present in popies of 2-1000. Plasmid WR201 was obtained from the Walter Reed Army Institute of
Research, and results from insertion of a 2.3 kb EcoRI fragment from
lambda mpfl encoding the complete CS protein gene P. falciparum into
vector pUC8. A recombinant DNA vector is claimed, which comprises a DNA
sequence contg. the coding sequence of the CS P. falciparum into
Inked to an expression control sequence. Prefd. expression control
sequences include the yeast glyceraldehyde-3P-dehydrogenase gene (TDH3)
promoter and the yeast ornithine carbamoyl transferase gene (TDH3)
promoter and the yeast ornithine carbamoyl transferase gene (TDH3)
promoter and the yeast ornithine carbamoyl transferase gene (TDH3)
promoter and the yeast ornithine carbamoyl transferase gene (TDH3)
promoter and the yeast ornithine carbamoyl transferase gene (TDH3)
promoter and the yeast ornithing its first first 50bp. Also claimed is a
transformed host cell, a method of culturing the call to produce CS, the
protein coding sequence, minus its first 50bp. Also claimed is a
transformed host cell, a method of culturing the call to produce CS, the
contain, and a vaccine. The vector comprises a 192 bp Sau3A fragment
coding for 16 tetrapeptide repeats of the P. falciparum CS protein
derived from Sau3A digestion of a 1215 bp StuI-RsaI fragment of WR201
containing the P. falciparum CS protein coding sequence minus
approx. its first 50 bp, or two, three, four or more tandem copies of
such 192 bp Sau3A fragment.
                                                                                                                                                                                                                          Circumsporozoite gene; Plasmodium falciparum; lambda mPfl; vaccine;
                                                                                                                                                                                                                                                                yeast glyceraldehyde-3P-dehydrogenase gene (TDH3) promoter;
yeast ornithine carbamoyl transferase gene (ARG3); repeat region.
                                                                                        Sequence encoded by the circumsporozoite (CS) gene of Plasmodium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Expression of P. falciparum circumsporozoite protein by yeast using recombinant DNA vector having coding sequence linked to

                                                      This sequence represents the RTS hybrid protein which is encoded by the RTS expression cassette. This hybrid consists of a methionine residue derived from S. cerevisiae TDH3 gene sequence, three amino acids, Met-Ala-Pro, derived from a nucleotide sequence created by the cloning procedure used to construct the hybrid gene, a stretch of 189 amino acids representing amino acids 210 to 398 of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                          circumsporozoite protien (CSP) of Plasmodium falciparum strain 7GB, an amino acid Arg created by the cloning procedure, four amino acids, pro-val-Thr-Asn, representing the four carboxy terminal residues of hepatitis B virus (HBV), adw serotype, pres2 protein, and a stretch of 226 amino acids specifying the S protein of HBV, adw serotype. This protein, and RTS* (see also AAR37797), may be combined with adjuvant and used in a vaccine for preventing plasmodium infections. The vaccines produce a humoral response and also a cellular immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "Represents amino acids 210-398 of the CSP of

This is the amino acid sequence of a recombinant protein comprising amino acids 1613-1705 of the Plasmodium falciparum merozoite surface protein 1 (MSP1) 19 kD C-terminal fragment (p19), linked to a glycosylphosphatidylinositol membrane anchoring sequence. p19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "amino acids derived from P. falciparum MSP1 p19 fragment"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5
                                                                                                     This sequence represents the RTS* hybrid protein which is encoded by the RTS* expression cassette. This hybrid consists of a methionine created derived from S. cerevisiae TDH3 gene sequence, three amino acids. Met-Ala-Pro, derived from a nucleotide sequence created by the cloning procedure used to construct the hybrid gene, a stretch of 189 amino acids representing amino acids 210 to 398 of the circumsporozoite protien (GSP) of Plasmodium falciparum strain NFS4, an amino acida Arg created by the cloning procedure, four amino acids, on amino acid Arg created by the cloning procedure, four amino acids, or hepatitis B virus (HBV), adw sercype, pres2 protein, and a stretch of 226 amino acids specifying the S protein of HBV, adw sercype. This protein, and RTS (see also AAR37796), may be combined with an adjuvant and used in a vaccine for preventing plasmodium infections. The vaccines produce a humoral response and also a cellular (fmuule).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              96..116

```
This is the amino acid sequence of a recombinant protein comprising amino acids 1613-1705 of the Plasmodium falciparum merozoite surface protein 1 (MSP1) 19 kD C-terminal fragment (p19), linked to a glycosylphosphatidylinositol membrane anchoring sequence. p19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.
                                                                  Recombinant protein containing Plasmodium merozoite surface protein-1 p42 fragment - useful in antimalarial vaccines, also new antibodies for diagnosis and protein purification
                                                                                                                                                             Disclosure; Fig 1B; 85pp; French.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S47282

merozoite surface antigen 1 - malaria parasite (Plasmodium falciparum) (strain RO-71

G:Species: Plasmodium falciparum

A;Variety: strain RO-71

C:Date: 06-Jan-1995 #sequence_revision 26-Jul-1996 #text_change 09-Jun-2000

C;Accession: S47282

Submitted to the EMBL Data Library, July 1994

A;Pescription: Plasmodium falciparum: recombination within the C-terminal region of a A;Reference number: S47282

A;Reference number: S47282

A;Rocession: S47282

A;Rocession: S47282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Title: DNA sequence of the gene encoding a Plasmodium falciparum malaria candidate A;Reference number: S05428; M0ID:89345189
A;Accession: S05428
                                                                                                                                                                                                                                                         - malaria parasite (Plasmodium falciparum) (isolate NF54)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A;Molecule type: DNA

apical membrane antigen 1 - malaria parasite (Plasmodium falciparum)
C;Species: Plasmodium falciparum
C;Species: Plasmodium falciparum
C;Date: 12-Oct-1989 #sequence_revision 12-Oct-1989 #text_change 09-Jun-2000
C;Accession: A3249
E;Peterson, M.G.; Marshall, V.M.; Smythe, J.A.; Crewther, P.E.; Lew, A.; Silva, A.; Andé
Mol. Cell. Biol. 9, 3151-3154, 1989
A;Title: Integral membrane protein located in the apical complex of Plasmodium falciparu
A;Reference number: A32499; MUID:89384584
A;Accession: A32499
A;Residues: Dreliminary
A;Molecule type: DNA; mRNA
A;Residues: 1-622 cPET>
A;Residues: 1-622 cPET>
A;Residues: 1-622 cPET>
A;Cross-references: GB:M27133; NID:9160072; PID:9160073
C;Keywords: membrane protein; surface antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12;

The circumsporozoite protein gene from NF54, a Plasmodium falciparum isolate used in malaria vaccine trials."
Mol. Biochem. Parasitol. 35:185-190(1998).

-!- FUNCTION: THE CIRCUMSPOROZOITE PROTEIN IS THE IMMUNODOMINANT SURFACE ANTIGEN ON THE SPOROZOITE (THE INPECTIVE STAGE OF THE MALARIA PARASITE THAT IS TRANSMITTED FROM THE MOSQUITO TO THE VERTEBRATE HOST).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- MISCELLANEOUS: THE C-TERMINAL REGION IS PROBABLY USED FOR ANCHORING THE PROTEIN TO THE CELL MEMBRANE. THE REPEAT SEQUENCES WOULD BE THE SURFACE ANTIGEN OF THE ORGANISM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             27; Gaps

GENERAL INFORMATION:

APPLICANT: Berzofsky, Jay A.

APPLICANT: Berzofsky, Jay A.

APPLICANT: Abless, Jeffrey D.

APPLICANT: Pendleton, C. D.

APPLICANT: Nara, Peter

APPLICANT: Nara, Peter

APPLICANT: OF INVENTION: COMPOSITE SYNTHETIC PEPTIDE CONSTRUCT

TITLE OF INVENTION: ELICITING NEUTRALIZING ANTIBODIES AND CYTOTOXIC T

TITLE OF INVENTION: LYMPHOCYTES AGAINST HIV

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
